

# Email And Chat Solution

Sehco provides sophisticated email, calendaring and collaboration services. It is considerably easy to deploy and manage and is by 50% cheaper than other Systems. A special advantage of Sehco is its ability to present variable types of services for different users.

## Open Source Environment, Linux Operating System

Sehco's considerably straightforward Deployment procedure, enables users to deploy it without difficulties in their data center, in a public or private cloud on linux OS, it also enables users to meet data control requirements and satisfy privacy needs. It also supports full multi-tenancy and delegated administration for hosting and service providers. Service providers can benefit from role-based delegated administration for creating domain settings or limited administration settings per account. through Class-of-Service feature, Sehco provides an adjustable web client experience and management of end-user features, quotas and storage policies.

## Superior End-User Experience

Sehco has created a different end-user experience on all major platforms (Windows, Mac, Linux)—online through all Web browsers and via any desktop email client (MS Outlook, Mac Mail, Thunderbird, etc.)—. Sehco's collaboration tools, mail filters and its highly functional search for inboxes, calendars and attachments, provide users with a higher level of satisfaction and also reduce support costs.

## Backup & Restore

Sehco's backup and restore system backs up every single item and event on the server with great precision. due to a highly functional duplication and compression system chap-par's backup system prevents data loss using ever-consistent algorithms, while still saves disk space — up to 50% —. Its special features include: six restore features; from a single-item restore to complete disaster recovery, all of which are transparent to the end-user and are 100% OS.

## Security Features

Sehco offers instant functionality for 2-factor authentication, email encryption, secure comms via TLS, HTTPs and more. It is easily integrated with third-party security apps. Two-Factor Authentication, provides a physical layer for login and accordingly secures your mailbox more. Post-screen for Sehco MTA Keeps spambots away, and provides more SMTP server processes available for clients and delays the onset of server overload conditions. Sehco also has built-in Web application firewall for avoiding web application attacks , this feature is significant because it is not common for applications to have built-in WAF.
